

**Due date: Dec. 3rd/2018**

You can do this assignment with one partner, in which case, hand in one piece of work with both your names on it.

Create a Java app using **Java Swing** components and **layout managers**, call it **BookBuy.java**, that will allow customers to select a book to purchase. It should have the following functionality and layout : (please note that you are prohibited from using any software that can auto generate the code):

### Main Screen

The **initial main screen** is as shown below.

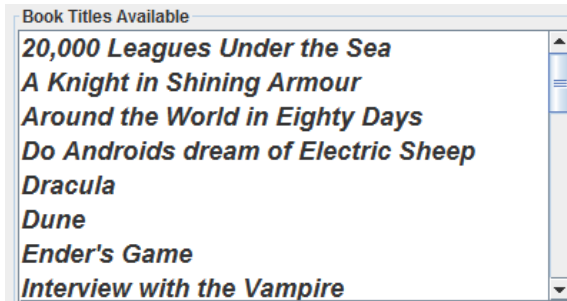

## Functionality

- Initially, most of the boxes are blank, as shown on the first page. The user will first click  combo box, to display

the available **book types**. The selections are:

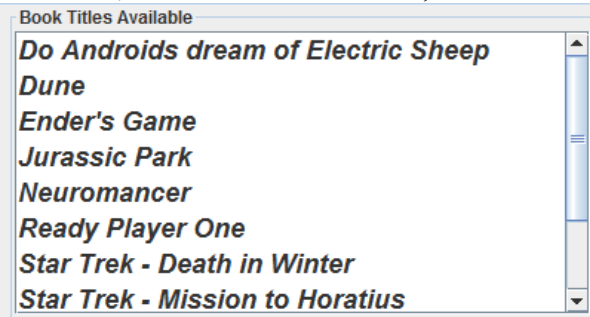

all the books available, i.e.

. If user selects “**All Types**” ,then the **book JList** box will display

(Note, book JList box will require scrollbars, **although it is not shown here**, if you have more book titles beyond the size of the JList box)

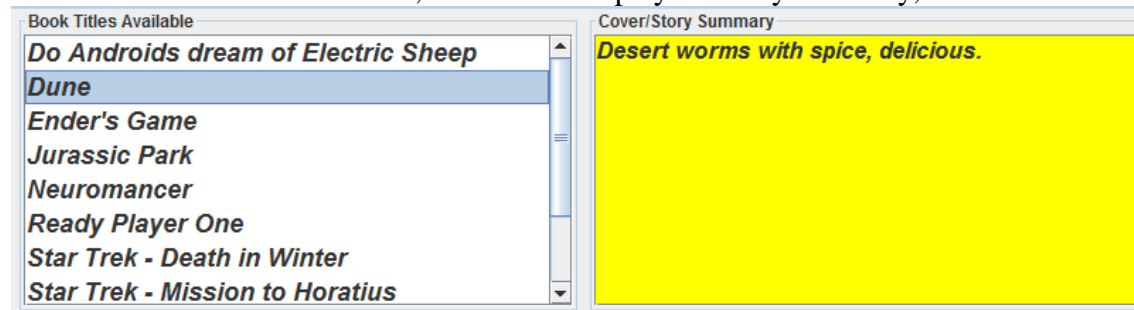

However, if user selects “**Sci-Fi**”, then the Book JListbox will only display those **Books available in that category**, i.e. in this case it would be:

2. Upon clicking a Book title, that Book's **cover** will appear in the **Cover/Story Summary JLabel** area box (in **Arial, bolded, italic and your choice for text size, with scrollbars**).

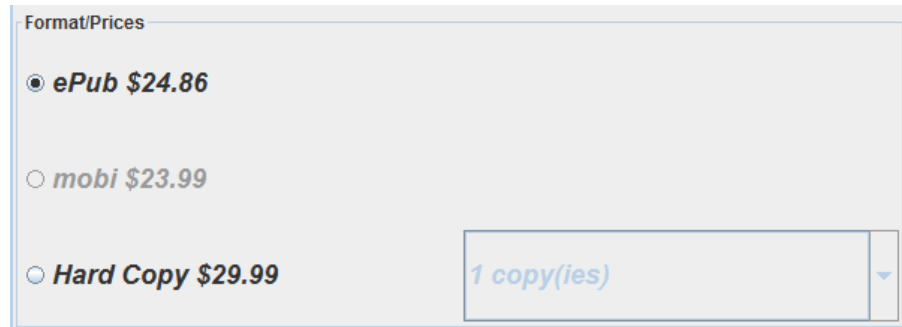

When the user moves the **mouse over the JLabel area**, it will then display the story summary, i.e.:

Of course, when you move the mouse away from the JLabel area, it will re-display the cover again, i.e.:

Also, it's **available format** should be indicated in the **Format/Prices JRadio buttons** (Note, whichever format is **NOT** available, then that JRadio button **should NOT be selectable**, and is “grayed out”), i.e.:

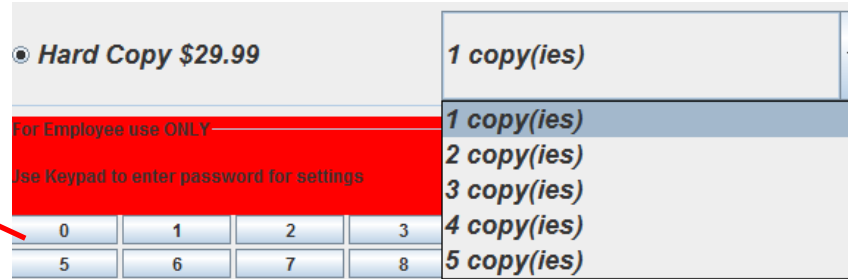

displayed in their corresponding **JRadio button text**.

Note also the **corresponding prices** (different for each book title) are

So above shows “Dune” is **only available in ePub format for \$24.86 (and is already selected by your program) and in physical Hard copy format for \$29.99 each**. As the hard copy format is available, the user can purchase multiple physical copies, so the JComboBox is available to the user, but only if he/she clicks the **Hard Copy \$29.99**. See below for the number of selections from the JComboBox:

use `.getActionCommand()` to get button's label (text)

try to test  
if(buy)

else if (clear)

else..else.  
then

psw +=  
`e.getActionCommand();`

When you click another available JRadio button, then this JComboBox will be disabled again.

The “mobi” format is not available, so it is **grayed out**, but do make sure to display the current price for it.

Note, for any book title, the “ePub” format should be **selected as default**, **BUT only if available**. If “mobi” and “Hard Copy” format is available, then “mobi” would be the default and so on.

☒ **ePub \$24.86**

3. If the following format was selected and if everything is fine, then it will display the book title ( and for which format) in the **Books selected JList box**. The *accumulated* total will appear as shown in the **total JTextField** (It should also have a **cyan background and is READ ONLY**) i.e.:

Format/Prices

☒ **ePub \$24.86**

☐ *mobi \$23.99*

☐ **Hard Copy \$29.99**

1 copy(ies)

For Employee use ONLY

Use Keypad to enter password for settings

5	6	7	8	9

Your Selection

Dune (for ePub)

Clear

Clear All

Total: \$24.86

**NOTE:** if the user clicks the button, BUT **NO book** title was selected, then the following error box should appear:

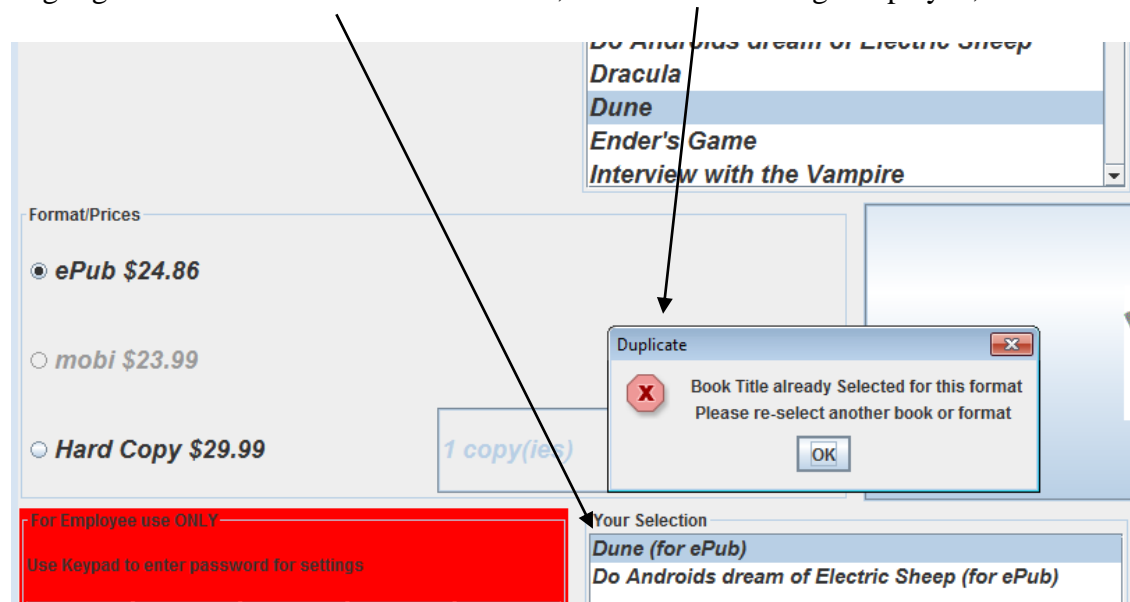

Also, if a book title is **NOT available in any format**, but the user still clicks the button, then the following error box should appear.

For “ePub” and “mobi” format only, if the user **accidentally** chooses a book title that has already been selected, then when the “Buy” button is clicked, the duplicated book is highlighted in the **Your Selection** list box, and an error message displayed, i.e.:

The user can select “Dune” for “mobi” format (assuming it is available), but after that the user cannot select Dune for either format again

For the “**Hard Copy**” format the user can select as many physical hard copies to buy (as long as it is available) and as many times as the user the user wants, i.e the following shows the user has selected copies to purchase:

The screenshot shows a book purchase interface. At the top, a dropdown menu lists books: *Dune*, *Ender's Game*, and *Interview with the Vampire*. Below this, the 'Format/Prices' section has three radio buttons: *ePub* \$24.86, *mobi* \$23.99, and *Hard Copy* \$29.99 (which is selected). To the right of the format selection is a quantity field showing '1 copy(ies)'. A large 'BUY' button is visible. Below the format selection, there is a red box labeled 'For Employee use ONLY' with a keypad for entering a password. To the right of the keypad, a 'Your Selection' list shows: *Dune (for ePub)*, *Do Androids dream of Electric Sheep (for ePub)*, *Dune (2) (for Hard Copy)*, and *Dune (1) (for Hard Copy)*. At the bottom right, a blue box displays 'Total: \$140.28'. Three arrows originate from a single point at the top left and point to the 'Hard Copy' radio button, the quantity field, and the 'Total' box.

The **total amount accrued** so far is then displayed in the **total JTextField** next to it. *This basically keeps a running total.*

3. Once the user is **ready to buy the Books selected**, he or she will need to enter a credit card number

Enter Credit Card#: [.....]

(NOT real of course), and click the

Submit

button. A warning dialog

A warning dialog box titled 'WARNING' with a yellow warning icon. The text inside says 'Are You SURE ?'. There are two buttons at the bottom: 'Yes' and 'No'.

box should then appear. If user clicks on **Yes button**, then **ALL** the Books selected will be deleted from the **Your Selection JList Box**, with \$0.00 displayed in the **Total JTextField**. If the **No button** or **close button** is clicked, then **NO action is taken** (assuming the customer wants to purchase more).

Note, if there are **NO books selected for purchasing**, but the customer **still clicks on the “Submit” button**, then **after the usual Yes/No warning**

dialog box, it should display

If user clicks “Submit” and there are books selected for purchasing but **did NOT enter a credit card number**, then after the usual “ Are You

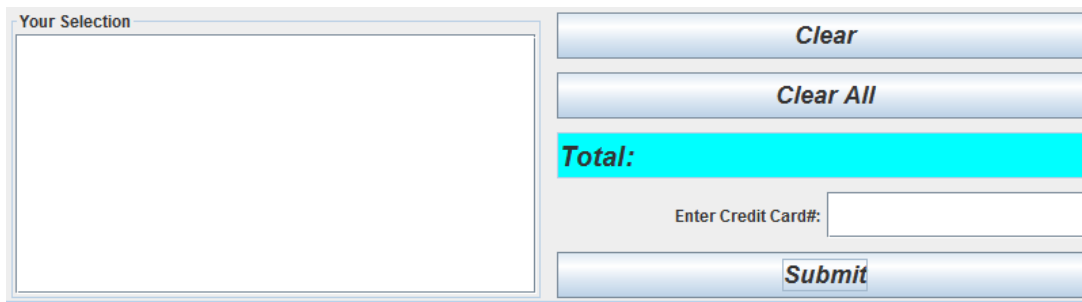

Sure Yes/No” warning box, it should display

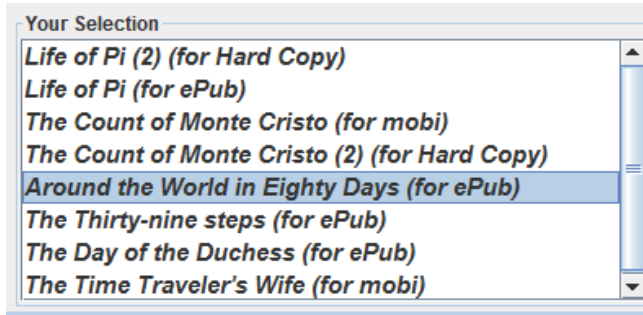

4. If **everything is fine with the credit card transaction**, then it should display

After “OK” is clicked on, then the **Your Selection JListBox**, **Totals** and the **credit card field** should ALL be **cleared**, i.e:

## Clear and Clear All Button

The Your Selection JList Box is **single-selectable**, i.e.

. Once selected, the user can click the

button, in which case that single selection will be **deleted from the JList** box with

the **Total JTextField** updated ***immediately*** that is, the amount should be reduced from **Total: \$201.38** to **Total: \$166.52**, i.e. it should keep a running total. **NOTE**, if the user continues to clear every selection in the Books selected JList box, **then the total eventually should be 0.00**

If the **Clear button** was clicked **BUT NO book selected**, then the following error box should appear.

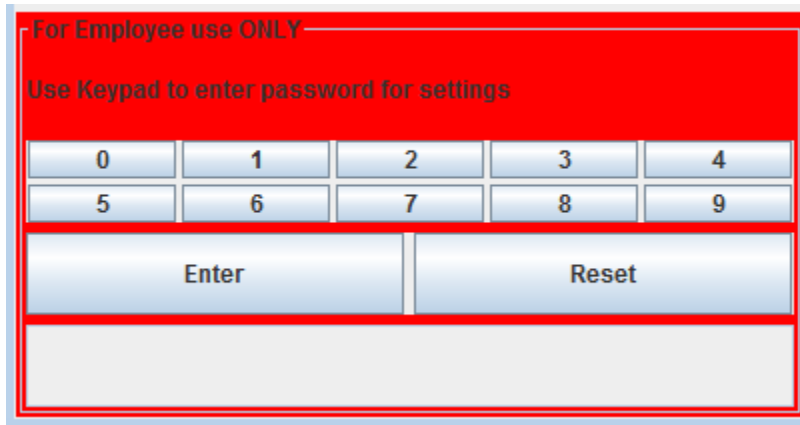

If the  button is clicked then a warning box such as

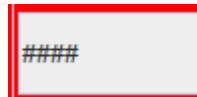

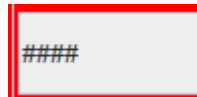

is displayed. If user clicks on **Yes button**, then **ALL** the Books selected will be deleted from the Your Selection JList Box, with **\$0.00** displayed in the **Total JTextField**. If the **No button** or **close button** is clicked, then **NO action is taken**.

## Update JPasswordField

This is a numeric keypad, where employees can enter a numeric password by clicking on the keypad (i.e. NOT entering on the keyboard). If the  button is clicked and the correct password was entered, then it will go into the Book Update window (please see next page for details).

When clicking the password, make sure that it is masked out i.e.  (note the **different mask**). The password can be any number of digits, **which I leave up to you**. You can “**hardcode**” the passcode into the program. If user enters the wrong password, then the following error box

should appear:

The  merely **clears** the password field (just in case you entered the wrong password and want to restart).

Upon entering the **correct** password it **should clear the Book Titles Available JList box, Cover/Story Summary** and the **price JRadioButtons**, **with radio buttons no longer selectable**, i.e.:

YOUR NAME Book Buy App

Submit

Note, the **Your Selection JList box** and **Total JTextField** is **not** cleared. Then the following Book Update window appears (see next page).

### Book Update Window (Save this part as UpdateFrame.java)

Upon entering the correct password, this will generate a **window** with the following layout and components.

Note, this window is **resizable** BUT the **layout should remain the SAME**, whatever the size of the window, i.e. use **Layout Managers**.

The screenshot shows a Java Swing window titled "Book Update". The window has a standard Mac OS X title bar with minimize, maximize, and close buttons. The main content area is divided into several sections:

- Book List:** A dropdown menu showing "20,000 Leagues Under the Sea".
- Current/(Change to) Book Type:** A dropdown menu showing "Adventure".
- Add Story Summary:** A text area containing the HTML code: `<html>Undersea adventure <br />with captain nemo.</html>`.
- Book Formats Available:** A section with three checked checkboxes: ☒ *ePub*, ☒ *mobi*, and ☒ *Hard copy*.
- Price:** A section with three price fields:
  - ePub Price:* 34.86 (highlighted in yellow)
  - mobi Price:* 23.99 (highlighted in green)
  - HardCopy Price:* 9.99
- Update ALL:** A large blue button with the text "Update ALL".
- Yellow Area:** A large yellow rectangular area at the bottom right of the window.

TextArea, with  
scrollbar

Here the user can change the Book’s properties i.e. it’s type, format, story summary and prices. The user first selects the book title from the Book pull

respective components, i.e. and

Book Formats Available

☒ ePub

☒ mobi

☒ Hard copy

Price

ePub Price: 34.86

mobi Price: 23.99

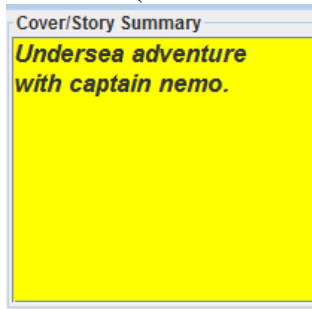

HardCopy Price: 9.99

The user can **change** the associated Book type by selecting from the **Book type Combo** box. (here you are about to change from “Adventure” to “Sci-Fi”)

**The user can also change the Story Summary in the “Add Story Summary” JTextArea box (make sure scroll bars do appear horizontally and vertically as required)**

. If you want the text to appear as multiple lines in the **JLabel** in **the main app**, then you need to enter the text as shown (i.e. with `<html>` and `<br />`). When you display this in the main app, it would appear as thus:

The user can also change what format by clicking on any of the checkboxes i.e. (For example, in this case all three formats are available. Besides that, the user can also **reset the prices** by entering new prices for each of the corresponding formats in their respective

Price

<i>ePub Price:</i>	34.86
<i>mobi Price:</i>	23.99
<i>HardCopy Price:</i>	9.99

JTextFields i.e. **HOWEVER** be sure that if the user accidentally enters more than 2 decimal places, i.e. he or she enters 45.7892, then it will round to 45.79 and that will be the price displayed in the text box and used in subsequent calculations. (**Hint:** first convert to double, use **DecimalFormat twoDecimal = new DecimalFormat("0.00");** to round to 2 decimal places and then resave back.

Once you are satisfied with **all** changes, then the button **MUST** be clicked (otherwise the changes made will **NOT** be

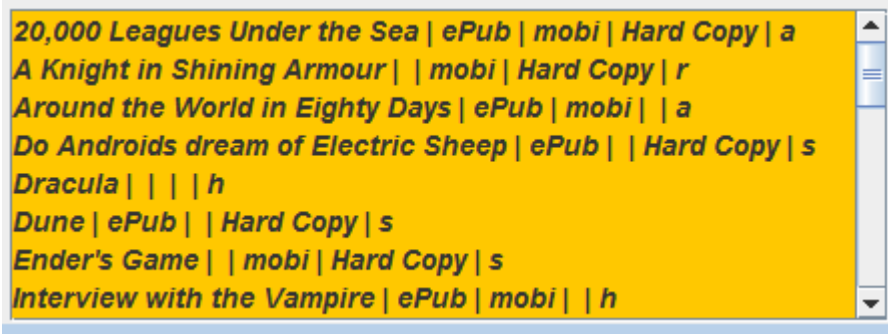

**kept**). The following confirmation dialog box should appear. The changes made here, **MUST** then be reflected in the previous main app.

## Book List Menu

This should have the above selections and corresponding mnemonics.

- If the user selects **Full List** , then it should display in the Book JTextArea, a **full** list of all the Books, what format and type i.e.

(Note, the font is Helvetica, bolded, italics but your choice on exact

font size.) AND HAVE scrollbars available.

- If the user selects **Clear** , then it simply clears Book JTextArea

## Exiting Book Update

- Ensure also the following buttons do work with this window.

**Note:** It is **important** that when the user exits from this **Book Update screen** and returns back to the main app, the user **MUST** select from the “Please Select type of Book” pull down box, because when you return, the JComboBox for the available Books , Story summary and the prices are all blank initially (with the format radio buttons **NOT selectable**).

YOUR NAME Book Buy App

Submit

When you select a book title, it will then display that book’s details, and it should **reflect the changes** you made in the book update window.

## Classes

You must create at least 2 classes to start off with:

- **class BookInfo**  
{

```
private String strBookTitle;  
private char chBookType;  
private boolean boolBookFormatAvail[] = new boolean[3];  
private double doubBookPrice[] = new double[3];  
private String strBookCover;  
private String strBookComment;
```

we can use vector for Year  
Selection

create set and get

Create a **constructor** to initialise all the above

As the variables are private, create the necessary **public instance methods** to **set** and **get** these values.

- **class BookList**

This is a **separate** class, not related in anyway to **Class BookInfo**. It should consist of:

- an **array** of **29** references (or more if you want to add more book titles).
- An **instance method** (call it **createList()** ) to instantiate each of these references with the Book Title, Book type, Book format availability( epub, mobi,hard copy), prices and story summary.

For example, below shows a partial list:

```
class BookList  
{
```

```
    BookInfo[] bkList;
```

```
    public void createList()  
    {
```

```
        bkList = new BookInfo[29];
```

```
        bkList[0] = new BookInfo("20,000 Leagues Under the Sea",'a',  
true,true,true,34.86,23.99,9.99,"20000 leagues under the sea.jpg","<html>Undersea adventure <br />with  
captain nemo.</html>");
```

```
        bkList[1] = new BookInfo("A Knight in Shining Armour",'r', false,true,true,30.86,12.99,7.99,"A  
Knight in Shining Armour.jpg","A knight in shining armour");
```

```
bkList[2] = new BookInfo("Around the World in Eighty Days",'a',  
true,true,false,34.86,23.99,5.99,"Around the World in Eighty Days.jpg","Travelling before travel agents");
```

```
bkList[3] = new BookInfo("Do Androids dream of Electric Sheep",'s',  
true,false,true,25.45,10.92,8.99,"Do Androids dream of Electric Sheep.jpg","<html>Rick Decard must retire 5  
replicants<br /> and wants to be called BladeRunner.</html>");
```

```
bkList[4] = new BookInfo("Dracula",'h',  
false,false,false,24.86,23.99,44.99,"Dracula.jpg","<html>Yes, it's the guy<br />with the fangs and a liquid  
diet.</html>");
```

```
bkList[5] = new BookInfo("Dune",'s', true,false,true,24.86,23.99,29.99,"dune.jpg","Desert worms  
with spice, delicious.");
```

etc.....

Note, for **BookType**, use the following:

a	Adventure
r	Romance
s	Sci-Fi
h	Horror

### What to hand in:

1. Front cover page with your name (your partner's name), course, assignment number, instructor's name, section and due date. (If you did this assignment with a partner, then hand in ONE piece of work with BOTH your names on it).
2. Hardcopy of the program listing of ALL classes.
3. Zip up your files and call it *csis1275\_yourSectionNumberF2018YourNameAs4.zip* and do a file submission through **Blackboard**
4. The **password** for the **Book Update**.

**ENSURE THAT THIS IS YOUR OWN WORK !!!!!!!**

**MARKS WILL BE LOST IF ANY OF THE ABOVE IS NOT MET**
